

Energy Policy

The Monoworld Group; Senior Management Team acknowledge the impact of our energy consumption on the environment; we aim to reduce this impact at all of our sites.

We regard compliance with international and local laws as the minimum standard; In all cases we will actively seek ways to exceed these in relation to energy use, consumption and efficiency;

We are committed to continually improve our energy performance through systematic management of energy.

We reduce energy consumption wherever it is cost effective and practical to do so.

We consider energy performance in long-term planning. We will consider energy efficiency and design for energy performance as part of our procurement process.

We set energy performance indicators (KPI's), by establishing a baseline and agreeing parameters with relevant stakeholders.

We review monthly energy data against objectives and targets.

We identify and share good practices.

We ensure that all employees have the appropriate information and resources, knowledge and competence to achieve energy objectives and targets.

We review this policy regularly to ensure its continuing effectiveness.
